

## The way to city energy efficiency with ACCENT

Build the energy efficiency platform of your city !

Build a robust and consistent energy & climate strategy with ACCENT experts

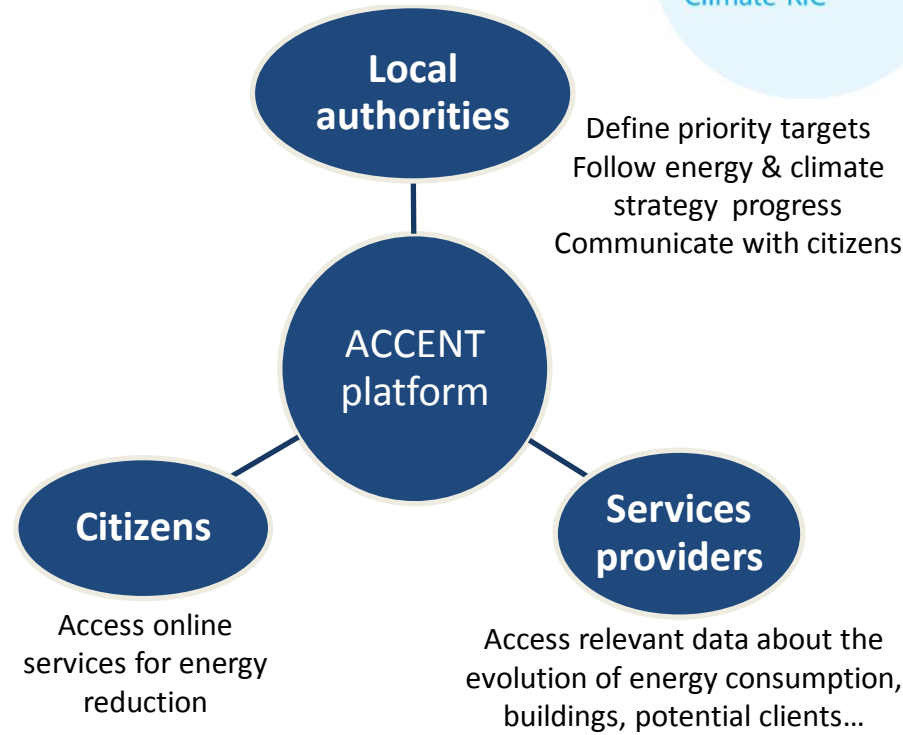

Implicate local stakeholders to increase the strategy efficiency by deploying it on a web platform

Turn this strategy into money by providing energy efficiency services

See next slides for more details

Answer the survey and participate to the workshop organized to specify with you the ACCENT services through Proof of Concept & design thinking principles

# Why ACCENT ?

 **Local authorities have great ambitions** regarding their energy efficiency, GES emissions and climate mitigation strategies :

- Driven by renewable energy development, fossil fuels independence and EU Climate targets
- With a will to implicate various stakeholders (Network operators, citizens, utilities, building insulation companies) in their energy transition

 But **several challenges are met at the moment** as it is rather difficult :

- To build and assess a strategy that takes into account future energy trends (both environmental, technological and economic ones)
- To meet the needs of local stakeholders regarding the use of all the energy data produced during the building of the strategy

# What is ACCENT ?

ACCENT is meant to **ACcompany the Cities in ENergy sStrategy**

ACCENT is a **Climate-KIC project** composed of 7 partners

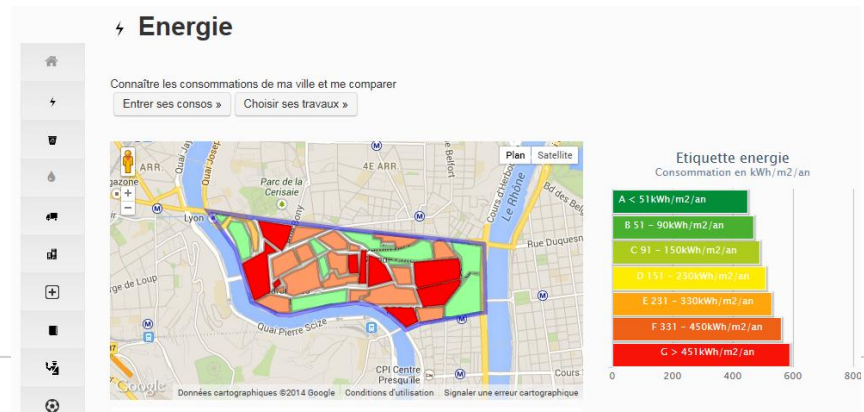

ACCENT is embedded in the **Sustainable City System KIC** theme

**ACCENT goal** is to validate and develop a service dedicated to local stakeholders in order to build, assess and deploy an energy and environmental efficiency strategy for the residential and tertiary buildings of the territory

→ The building and assessment of the 20 years strategy is made thanks to an economic and environmental approach.

→ The data produced are then deployed on a user-friendly GIS website dedicated to local stakeholders

*GIS interface of ACCENT services*

# ACCENT, an innovative development approach

■ ACCENT services will be designed thanks to a **participative and iterative approach** with future potential end-users

■ This will be achieved through the organization of a **survey** and several **workshops**:

- Workshops with local authorities to take into account the needs of city services and citizens
- Workshops with service providers (network operators, urban planners, utilities, building insulation companies...)

■ Schedule :

- Survey : April.
- Workshops : May-June

# The added value brought by participating in ACCENT workshop

- ❏ Discover new ways to build and develop your energy strategy
- ❏ Design the service that will best match your needs regarding energy strategy
- ❏ Think about new sources of revenues by investigating innovative business models based on ACCENT data
- ❏ Benefit from Climate KIC network to exchange with other local authorities about the energy strategy challenge
- ❏ Get a privileged access to ACCENT services
- ❏ Think about new ways of collaboration with service providers

## Organization details

- The workshops are 3-4 hours long
- They are located in the region of the participants (Bologna, Valencia, Paris, Brussels)
- Travel expenses are covered by ACCENT
